

TOOLS:

- Scissors or utility knife
- Carb spray or your favorite cleaner/degreaser
- Tape measure
- Isopropyl alcohol, pre-paint cleaner, or other non residue cleaner

APPLICATIONS:

- Interior Trim Panels
- License plate brackets
- Speakers
- Harnesses
- Linkages

TIPS:

1. A little db Gasket will go a long way! Only small pieces of this material are necessary to prevent squeaks, rattles and buzzes from occurring.
2. Take a moment to measure the surface to be treated to make sure enough db Gasket is available to complete the installation.
3. Be sure db Gasket and panel are above 65°F, so adhesive makes good contact and cures properly

INSTALLATION:

1. Be sure to clean the surface of the components by cleaning and degreasing them. Give the panel one final wipe with isopropyl alcohol, pre-paint cleaner, ammonia based aerosol glass cleaner, or other non-residue leaving cleaner.
2. Measure twice, cutting and fitting the db Gasket to be installed first.
3. Make sure the installation of db Gasket will not impede the proper operation of any mechanical component.
4. Remove the paper release liner and apply the db Gasket onto the surface.
5. Hold firmly for 30 seconds.
6. Done!
